## Experience

**Recommended by:**
Roman Sandler, Frontend Tech Lead @ Venn, 054-9732336
Amit Yizraeli, Product Manager @ Drorsoft, 054-6735034

**tl;dr:** For the past **4 years** I have been working as a freelance **Full Stack developer**, the following are recent examples of such projects:

## Full Stack Developer · *Freelance @ NOAL* · May 2020 - Present

As a Full-stack Developer at NOAL I have collaborated with the internal development team, designers and product manager to create robust apps with great user experience, and deliver new features to the organization and its customers, working at a competitive pace befitting AGILE practices.

Working in sprints as a team, delivering features and fixes on tight deadlines, using CI/CD to ensure continous delivery, site reliability and fast turnover.

### NOAL Educational Library (Django, NodeJS and React)

- Completely built the backend as a RESTful API in Django with Django Rest Framework (Python), including viewsets, serializers, Test Driven Development (TDD), complex models, permissions, scoping.

- Participated in system design discussions and decisions, modeling the product from back to front, as well as deployment options and decisions.

- Collaborated on the frontend app built with Remix (React framework), in **typescript**, including E2E tests, reusable components, applying design from Figma, accessibility, receiving data from the backend, using tailwindCSS for styling, playwright for E2E tests.

- Taken features from zero all the way from the backend API, to the frontend design in production.

- Added analytics using segment

- Using sentry to trace and fix bugs.

### SPA (Single Page Application) for a Yom Haatz'maut game

- Created a frontend app for a game for independence day, that used videos to let students choose their own adventures

- Written in javascript, using React with hooks, functional components.

- Brought the concept and design to life from the POC (proof of concept) stage until production and real users using the app.

- **Maintaining an organizational finance web app** - built with a full stack python and angular framework, fixing bugs, diving into old code, implementing new features, rebuilding old components and migrating parts of the app from Angular 1 to React, refactoring back end code, changing css to fit new designs, migrating DB from myISAM to InnoDB, refactoring entire HTTP Response and error handling.

- **Code reviews, and introducing new developers to the projects and the code.**

## Frontend Developer · *Freelance @ Alvalinks* · Jan 2023 - Jun 2023

In collaboration with Drorsoft - creating a frontend app in React for a startup for video streaming analytics, worked with the customer (The co-founder), the designer and the backend developer to build the customer facing app.

- Creating all pages from the figma, reusable components, login.

- Creating charts and graphs using relevant libraries, processing the data from the server to create graphs that constantly update, and charts that can be manipulated by the user.

- Handling API requests, running stream tests, user authentication.

- Adjusting the design as the startup progressed and changed direction according to customer feedback, and stages of the company in its early days.

- Receiving feedback, bugs and notes from the customer and handling and fixing issues that arose.

- Collaborating with the backend developer to plan API endpoints, needed data, and system design changes that are required for the requested user stories, features, or epics.

## Frontend Developer · *Freelance @ Gesher Real Estate* · Sep 2023 - Jan 2024

In collaboration with Drorsoft, working with a team to help build the frontend app in Solid.js (React), along with another frontend developer, implementing design changes, and new features. taking designs and creating them in React.

- Working on a SAAS app.

- Working closely with backend developers and a frontend developer on the same projects, as well as a product manager, a designer, and the customers.

- Delivering clean quality code.

- Writing in javascript in React, using Solid.js.

## Education

## Bachelor of Education (B. Ed.) · *Beit Berl College*

## Skills

React, Django and DjangoRestFramework, Remix, Playwright, Javascript, Typescript, Python, SQL, Git, CSS, HTML, TailwindCSS.
